

BODY FAT DETERMINING DEVICE

Abstract Of The Disclosure

Provided is a small-sized body fat determining device capable of easily determining a body fat ratio.

5 A first electrode pair (1) and a second electrode pair (2) are provided on upper left and right sides of a surface (11a) and a back face (11b) of a card body (11) of a card type electronic calculator, respectively. The first electrode pair (1) includes a first measuring electrode (1a) provided on the surface (11a) of the
10 card body (11), and a first current path forming electrode (1b) provided on the back face (11b) of the card body (11). The second electrode pair (2) includes a second measuring electrode (2a) provided on the
15 surface (11a) of the card body (11), and a second current path forming electrode (2b) provided on the back face (11b) of the card body (11). An impedance between the first measuring electrode (1a) and the second measuring electrode (2a) is measured by
20 impedance measuring means provided in the card body (11).
